BUSINESS FOCUS & RELIABILITY THROUGH AUTOMATION

Lack of automation in software teams leads to low efficiency by causing high workloads for relatively low business impact.

With **DevOps** and **Infrastructure as code** we enable your software teams to focus on your core business logic and produce results faster and more reliably.

Automated build & deploy pipelines

Lead to shorter release cycles and reproducible deployments.

Automated quality assurance

Leads to fewer bugs in production and more capacity for feature development.

Monitoring & alerting

Lead to better understanding of your users and proactive identification of problems.

Grafana · ANSIBLE · GitLab · kubernetes · HashiCorp Terraform · Selenium · Prometheus · ELK · GitHub · docker · cucumber

YOU GET

- Better efficiency of your dev team
- Faster time to market
- Shorter feedback cycles
- Better availability and reliability
- Better user analytics
