UNLOCK THE POTENTIAL OF YOUR IT

Our Approach

Our external perspective enables IT decision-makers to conduct an objective analysis of your IT structure to identify potential productivity enhancements. We focus on risk mitigation by uncovering and securing vulnerabilities against cyber threats and compliance issues. Additionally, we enhance your future readiness by implementing modern IT strategies. Our approach aims to improve the performance, security, and long-term competitiveness of your company.

Your Value Add

- Gaining Overview
- Unbiased External Perspective
- Documentation of the Current State
- Insights into Current Quality (e.g., code, security, processes)
- Vulnerability Identification
- Recommendations for Action

QVEST

OUR SERVICES

- **Conception:** Development of a robust and future-proof architecture for complete platforms or components.
- **Integration:** Expert integration of components into existing architectures while considering quality standards and documentation.
- **Governance:** Ensuring compliance with the defined architecture, avoiding proprietary developments with conflicting technologies.

Tailored to Your Situation

Whether you need an unbiased external perspective due to a company merger, have recently taken on a new role with IT responsibilities, or simply don't have the time in your daily operations to gain an overview - we assist you in gaining that perspective!

Interview-Based Approach

Documentation or process instructions can become outdated or deviate from reality. With our interview-based approach, we ensure that we gather issues first-hand and assist your employees, rather than criticizing the inconsistency of existing documentation.

Open Communication

Our findings are presented not only to the management but also to all interested employees, to provide the employees of your organization with the confidence they deserve.

Collaborative Approach

IT systems are utilized and operated by people. In our collaborative approach, we emphasize working together with both management and all affected employees. Together we develop action items that satisfy everyone.

Different Modules for Focus Selection

With the help of our modular approach, we determine the focus of the assessment at the beginning. Even though it's possible for modules to change during the project due to individual findings, your personal input on „where it pinches“ is very valuable as a starting point.

OBJECTIVE: IMPROVE PRODUCTIVITY, REDUCE RISKS, AND STRENGTHEN THE FUTURE

With our IT assessment, you gain an overview of your current situation. We identify weaknesses in processes, technologies as well as security and provide you with recommendations for securing your business's future.
