# GREEN SOFTWARE CHECKUP

WHY GREEN SOFTWARE MATTERS

- Rising energy prices and power consumption lead to rising operational costs for software systems.
- More legal regulations for carbon efficiency in IT are expected for the future.
- Rising awareness for climate protection is an increasing competitive factor.

Our Green Software Checkup is a deep dive into the new topic of software carbon efficiency tailored to your software system.

- Introduction to software carbon efficiency
- Together we identify the most promising actions to reduce the carbon footprint of your software step by step
- Based on concepts of the Green Software Foundation
- Workshop duration is 2 days

Our consultants are certified by the **Green Software Foundation**

hardware efficiency

energy efficiency

carbon awareness

YOU GET

- Knowledge about carbon efficiency in software development
- A plan to reduce your software carbon footprint
- Future proofing in a more and more carbon efficiency aware world
- Reduced runtime costs of your software
